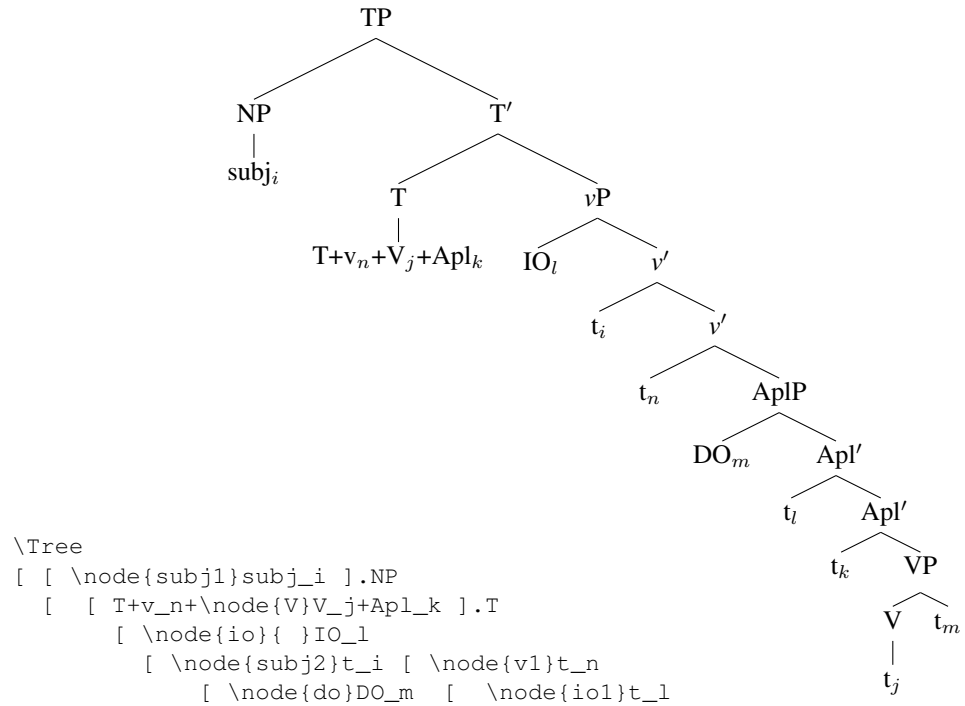
Examples: Drawing arrows on *qtree* trees

The arrow-drawing capabilities of the package *tree-dvips* (written by Emma Pease) can be used with trees drawn with *qtree*. The two packages are fully compatible.

Note, however, that tree-dvips relies on PostScript specials, and thus does not work with pdfLaTeX. This file was generated as DVI and then converted to pdf.

Tree-dvips is not included in the distribution of *qtree;* it is available on CTAN.

Thanks to Seth Kulick for telling me about the combination, and to Amanda Seidl for contributing the verb-movement example.



```
\Tree
[ [ \node{subj1}subj_i ].NP
  [  [ T+v_n+\node{V}V_j+Apl_k ].T
       [ \node{io}{ }IO_l
         [ \node{subj2}t_i [ \node{v1}t_n
             [ \node{do}DO_m  [  \node{io1}t_l
                 [ \node{apl1}t_k [ [ \node{V1}t_j ].V
                   \node{do1}t_m  ].VP ].Apl\1
           ].Apl\1 ].AplP ].{\it v}\1 ].{\it v}\1
  ].{\it v}P ].T\1  ].TP

\anodecurve[bl]{subj2}[bl]{subj1}{0.4in}
\anodecurve[bl]{do1}[bl]{do}{0.4in}
